A number is divisible by 8 if...

1. Add all the digits.
2. If the sum is divisible by 3, so is the number. (3, 6, 9, 12, 15... – can use the hundreds chart to check)

Example: $645 = 6 + 4 + 5 = 15$

it is even. (It ends with a 0, 2, 4, 6, or 8)

it ends in a 5 or a 0.

the last two digits are divisible by 4. (4, 8, 12, 16, 20... – can use the hundreds chart to check)

1. Take the last digit and double it.
2. Subtract that from the remaining numbers.
3. Repeat until you have 1 or 2 digits.
4. Is that number divisible by 7?
5. If so, do a quick mental math division to double check.

it is divisible by BOTH 2 and 3. Both rules have to work.

1. Add all the digits.
2. If the sum is divisible by 9, so is the number. (9, 18, 27, 45... – can use the hundreds chart to check)

the last three digits in the number are divisible by 8.

Example: $342 = 3 + 4 + 2 = 9$

Directions: Cut on the dotted lines and glue the notes on the inside of the foldable rules of divisibility page.

NOTE: There is one extra note that will be glued on the notes page separately from the rest.
